(Second Semester)

(2 Years—New Scheme)

CP-205

STATISTICAL ANALYSIS

Time : 3 Hours

Maximum Marks : 100

Note : Attempt any *Five* questions. All questions carry equal marks.

1. What do you understand by Univariate Analysis? Also differentiate between the dispersion and skewness.
2. A problem in statistics is given to three students Ram, Mohan and Shyam. Their chances of solving it are 0.2, 0.3, 0.4 respectively. What is the probability that problem is solved?

P.T.O.

Page 13,200

3. In a normal distribution, 7 per cent items are below 35 and 89 per cent are below 63. Find the mean and standard deviations of the distribution.
4. What is Sampling ? Discuss sampling methods in detail.
5. Differentiate the following :
 - (a) Sampling and non-sampling errors
 - (b) Type I and Type II error
 - (c) Parametric and Non-Parametric tests
 - (d) Primary and Secondary Sources of Data
 - (e) Process control and Product Control.
6. What is Estimation ? Discuss desirable properties of good estimator.
7. What do you mean by Statistical Hypothesis ? Discuss hypothesis testing procedure in detail.
8. Write notes on the following :
 - (a) Statistical Quality Control
 - (b) Problems in Construction of under numbers.
